

CONFIDENTIAL WORKING DRAFT // VERSION 0.2 // 2026

Language Personality Theory Research Collaborative

University Concept Note: 12-Month Academic Pilot

Operationalising and Testing a Generative, Language-Grounded Architecture of Personality

Lead Investigator: Sergey V. Golubkov | Contact: golubkovsv@gmail.com | Network: LPT-RC

1. EXECUTIVE SUMMARY & INVITATION TO UNIVERSITY PARTNERSHIP

The Language Personality Theory Research Collaborative (LPT-RC) invites a host university to co-lead a rigorous 12-month pilot programme. The aim is to independently operationalise and empirically test the foundational claims of LPT before committing long-term resources to downstream trait taxonomies. This project is structured as a pre-registered, cross-linguistic (Russian-English), open-science investigation. Full academic co-authorship, PI independence, and institutional hosting rights are provided.

2. THE SCIENTIFIC PROBLEM: TAXONOMIES VS. GENERATIVE ARCHITECTURE

Contemporary personality psychology relies heavily on descriptive trait taxonomies (e.g. Big Five, HEXACO). While psychometrically robust, factor-analytic trait models describe behavioral covariation without explaining the generative mechanisms that produce individual human manifestations in communicative contexts.

Language Personality Theory (Golubkov, 2002, 2026) offers a 3-dimensional coordinate geometry defining 8 orthogonal psychological manifestations across natural-social, subjective-objective, and interpersonal axes. The key scientific question: Are these 8 generative loci psychologically and linguistically discriminable under rigorous blind experimental conditions, or are they cognitive artifacts of semantic similarity?

3. THE 12-MONTH FLAGSHIP PILOT ARCHITECTURE

PHASE 1: OPERATIONALISATION WORKSHOP (MONTHS 1-3)

Scope: Formulate testable empirical predictions for each of the 8 manifestations and 3 axes.

Key Milestone: Empirical Specification v1.0 with auxiliary assumptions and rival hypotheses.

Pass Condition: Independent methodologist sign-off on local falsifiability criteria (Gate 1).

PHASE 2: BILINGUAL OPERATIONALISATION (MONTHS 4-6)

Scope: Design balanced bilingual Russian-English linguistic stimuli and observational indicators.

Key Milestone: Double-blind classification audit and cognitive interview protocol.

Pass Condition: Inter-rater reliability $\kappa \geq 0.75$ across languages (Gate 2).

PHASE 3: CORE FEASIBILITY STUDY (MONTHS 7-10)

Scope: Pre-registered empirical data collection under university ethics board approval (N=120-200).

Key Milestone: Confirmatory psychometric testing and revision log documentation.

Pass Condition: Minimum discriminability achieved over semantic baseline models (Gate 3).

PHASE 4: DEPENDENCY-AWARE DECISION & MAJOR GRANT CASE (MONTHS 11-12)

Scope: Formal Go / No-Go decision on full-scale confirmatory study or orderly exit.

Key Milestone: Joint peer-reviewed manuscript submission and external funding proposal.

Pass Condition: Empirical validation justifying 3-year consortium grant application (Gate 4).

4. RIGOROUS DECISION GATES & STOP RULES

To protect institutional and researcher resources, progression through the pilot is strictly conditional.

Each 3-month phase culminates in an explicit evaluation against pre-specified stop-rules:

GATE / MILESTONE	TIMELINE	PASS CRITERION	STOP / REVISION ACTION
Gate 1: Specification Theoretical Audit	Month 3	8 loci mapped to testable hypotheses with identified auxiliary assumptions & rivals	Revise theoretical mappings; no empirical data collection
Gate 2: Materials Bilingual Reliability	Month 6	Blinded classifier accuracy $\geq 75\%$ across Russian and English stimuli	Discard confusable items; re-run cognitive debriefing
Gate 3: Feasibility Data Pilot Audit	Month 10	Empirical discriminability observed exceeding semantic co-occurrence baseline	Publish negative/boundary findings; close pilot responsibly
Gate 4: Transition Grant & Publication	Month 12	Full pilot report accepted by co-leads; external grant proposal submitted	Transition to consortium stage; archive open dataset & code

5. CO-LEADERSHIP ROLES & INSTITUTIONAL HOSTING

The collaborative model guarantees complete parity and intellectual independence for the host university:

A. University Academic Co-Lead (Principal Investigator):

- Holds institutional ethics approvals and oversees data governance under university policy.
- Co-authors all academic publications with joint first/senior authorship.
- Leads external grant applications as institutional PI with full indirect cost recovery.

B. Theoretical Architect (LPT-RC Founder, S. V. Golubkov):

- Provides architectural specifications, 25-year historical background, and coordinate derivations.
- Contributes stimulus matrices and linguistic corpus annotations.
- Does not unilaterally control empirical conclusions or publication decisions.

C. Independent Psychometrician / Methodologist:

- Provides independent validation of operationalisations and pre-registration plans.
- Ensures pre-registered analytical code is executed blinded to experimental condition.

6. COMMITMENT TO RADICAL OPEN SCIENCE

All empirical studies within the pilot programme must adhere to strict open-science standards:

1. Preregistration: Study protocols, sample sizes, and hypotheses pre-registered on OSF prior to collection.
2. Open Materials: Matched bilingual stimulus banks and coding manuals made freely available under CC-BY.
3. Open Data & Code: De-identified participant records and reproducible R/Python pipelines archived publicly.
4. Negative Results Guaranteed: Null or disconfirmatory findings will be published with identical rigor.

8. NEXT STEPS: SCIENTIFIC SCOPING MEETING

University department heads, lab directors, and principal investigators interested in exploring a pilot collaboration are invited to arrange a confidential 60-90 minute online scoping meeting.

HOW TO ARRANGE A SCOPING SESSION

1. Email directly to: golubkovsv@gmail.com
2. Subject: LPT-RC Scientific Scoping Meeting // [Your Institution Name]
3. Include: Brief overview of your lab's psychometric, cognitive, or NLP capabilities
4. Response time: Within 48 business hours with preparatory technical dossier
